

Divine Intervention Episode

3-Viral Cases B

...

Some MS4

1

Viruses that destroy anterior horn cells.

2

The Coxsackie toxidromes. The differential diagnosis of a rash on the palms and soles.

3

Causes of the common cold.

4

Recent return from a trip to South America. AST and ALT are in the thousands. This patient consumed lots of foods on his trip and now presents with scleral icterus.

5

Quick overview of the flaviviruses (primarily testable information) -> Dengue virus, Yellow Fever.

6

Rubella vs Rubeola showdown. Other bug antecedents.

7

Barky, seal like cough with a CXR revealing the steeple sign.

8

A peace corps worker who just returned from Liberia is bleeding from every orifice. He spent some time playing with monkeys and eating some local meats.

9

Does H. Influenzae cause the flu? What actually causes the flu? As an aside (doesn't fit well elsewhere), what would your diagnosis be if a patient presented with severe leg myalgias and respiratory difficulty from pulmonary edema with a history of exposure to rodent "poop".

10

Watery diarrhea in an infant.
